EXPERIENCE

BAZ Group, Holland, Ohio — *Software Developer*

October 2017 - August 2018

- Designed and implemented enhancements to improve business efficiency by 15%, aligning with enterprise goals
- Created testing procedures that reduced logic and functionality errors from 60% to 10%, ensuring high-quality deliverables
- Optimized SQL queries to improve application responsiveness by 1-2 seconds, enhancing user experience
- Fixed bugs in in-house applications within 3 days on average, maintaining system reliability
- Applied design patterns that reduced development time from 10 to 4 days, accelerating project delivery

Anthem Blue Cross, Mason, Ohio — *Configuration Specialist [DevOps]*

July 2008 - August 2016

- Developed and automated deployment pipelines for Java applications, reducing release time from 1 hour to 20 minutes, supporting CI/CD practices
- Created automation tools for health checks that lowered outage durations by 20%, improving system availability
- Participated in outage resolution to minimize user impact, ensuring outages lasted less than 1 hour on average
- Converted legacy code to enable business access to historical data with a working prototype delivered in 1 week
- Assisted in application upgrades that reduced business seat costs, contributing to cost-effective technology solutions
- Managed password resets and compliance, supporting secure application access

EDUCATION

SKILLS

Testing & QA

- Test case design & execution
- Failure analysis & root cause identification
- Regression, functional, and integration testing
- Test data validation & edge case analysis

Automation & Tools

- Python (test tooling & analysis — *Aegis Prime*)
- CI/CD pipelines (build & deployment automation)
- Test reporting & log analysis (e.g., pytest output, failure clustering)

Technical

- SQL (query optimization, data validation)
- Debugging & bug tracking
- Application performance tuning
- Design patterns & code quality practices

DevOps & Systems

- Release automation & environment configuration
- Production support & outage resolution
- System monitoring &

PROJECTS

Aegis Prime — Built a Python-based system that clusters test failures, identifies high-frequency issues, and accelerates root cause analysis for large test suites.

Instead of digging through raw logs, Aegis automatically:

Clusters failures by error type and pattern

Identifies high-frequency and high-severity issues

Surfaces actionable insights from test runs

Reduces debugging time by turning noise into signal

This project is built for teams working with large test suites who need faster feedback loops and clearer visibility into what's actually breaking.
